TRUST BUT VERIFY.

At Your Loading Dock, Hope Is Not a Safety Strategy.

Would you trust a stranger with your employees' lives?

Every day, trucks back into loading docks, and employees begin working around them. Yet those employees often have no idea whether the driver properly secured the trailer—or simply forgot.

One overlooked safety step. One unexpected trailer movement. One potentially devastating consequence.

That's why my good friend Rowdy Brixey of Brixey Engineering shared this simple statement with me over a decade ago that I've never forgotten:

"TRUST BUT VERIFY or YOU'LL GET WHAT YOU ALLOWED. HOPE IS NOT A STRATEGY"

A glad hand lock provides an important layer of protection by preventing unauthorized reconnection of the trailer's air supply while properly installed.

But here's the question every safety manager should ask:

What good is a safety lock if nobody knows where it is?

That's where **GladHanger** makes a difference.

GladHanger gives your glad hand lock a dedicated, highly visible home—right where it's needed. No searching. No excuses. Just a simple way to keep a critical safety device accessible and help employees verify that the lock has been returned after use.

Because **safety isn't just about having the right equipment. It's about making sure it gets used.**

LOCK IT. CHOCK IT. RESTRAIN IT. INSPECT IT. JACK STAND IT.

Five steps. One consistent safety process. No shortcuts.

Trust your people. Verify your process. Protect what matters most.
